

Service Understanding

(Client Sales Questions / Challenges / Technical Questions)

1. Client Questions (Business / Sales Side)

- What exactly do you provide?
- How will this help my business?
- How much will it cost?
- How long will it take?
- Why should I choose you over others?
- Do I really need all these services?
- Can I start small and scale later?
- Will you provide support after delivery?
- What if something goes wrong?
- Do you have previous experience or examples?
- How do you ensure results?
- Will I get leads or business from this?

2. Strong Answers (Use in Calls)

What do you provide?

“We provide complete IT solutions—from website and app development to CRM systems, digital marketing, AI automation, and compliance—so you don’t have to manage multiple vendors.”

How will this help my business?

“It helps you build a strong digital presence, manage operations efficiently, and generate and track leads in a structured way.”

Cost?

“We suggest solutions based on your stage—starting simple and scalable so you don’t overspend initially.”

Timeline?

“We follow a phased approach with clear milestones, so you always know the progress.”

Why you?

“We focus on business-oriented solutions, not just development—everything we build is designed to support growth and scalability.”

Do I need everything?

“Not necessarily—we recommend starting with what’s most important for your current stage and expanding gradually.”

Support?

“Yes, we provide post-delivery support and maintenance to ensure everything runs smoothly.”

Results?

“We focus on building systems that generate and manage opportunities—results improve consistently with the right setup and optimization.”

3. Challenges You Will Face

- **Price objection (“Too expensive”)**
- **Delay (“Let me think”)**
- **No response / ghosting**
- **Comparison with cheaper competitors**
- **Lack of urgency (“We’ll do it later”)**

- **Trust issues (new company hesitation)**
- **Client confusion due to too many services**
- **Unrealistic expectations (instant results)**

4. Solutions to These Challenges

Price objection

“Instead of just cost, we focus on long-term value and scalability so you don’t need to rebuild later.”

Delay (“Let me think”)

“Sure—just to understand better, is it budget, timing, or clarity you’d like to think about?”

No response

Follow up with value:

“Sharing a quick idea that can help you manage enquiries better...”

Cheaper competitor

“May I know what they’re offering? I can help you compare to ensure nothing critical is missed.”

Lack of urgency

“Setting this up early actually saves a lot of time once your business starts growing.”

Trust issues

Break into:

- **Milestones**
- **Partial payments**

- Clear deliverables
-

Client confusion

Don't pitch everything—focus on:

👉 “What do you need right now?”

Unrealistic expectations

Set clear expectations early:

- Ads = faster
- SEO = slower
- Systems = long-term benefit

5. Technical Questions Clients Ask

Website

- Which technology will you use?
 - Will it be fast and SEO-friendly?
 - Will it work on mobile?
 - Will I get admin access?
 - Where will it be hosted?
 - How secure is it?
-

App

- Native or hybrid?
 - Android or iOS?
 - How will data be stored?
 - Will it scale with users?
-

CRM

- What does CRM actually do?
 - Can it be customized?
 - Is it cloud-based?
 - Can it integrate with WhatsApp/email?
 - Is my data secure?
-

Digital Marketing

- How will you generate leads?
 - How do you track performance?
 - Which platforms will you use?
 - How soon will I see results?
-

AI Agent

- What does AI actually do?
 - Is it hard to use?
 - Can it integrate with my system?
-

Backend / General

- What backend will you use?
 - Is the system scalable?
 - Will there be backups?
 - What about security?
-

6. Technical Answers (Simple + Powerful)

Website

“We use React.js to build fast and scalable websites.”

“Websites are optimized for speed, mobile responsiveness, and SEO basics.”

“You’ll get admin access to manage content easily.”

App

“We choose between native or hybrid based on your needs—hybrid is cost-effective, native is for high performance.”

“Data is stored securely using databases like MongoDB.”

“Apps are built to scale as your user base grows.”

CRM

“CRM helps track leads, manage follow-ups, and organize your business data.”

“It’s fully customizable and cloud-based for easy access.”

“We can integrate WhatsApp and email for communication.”

Digital Marketing

“We generate leads using platforms like Google Ads and Instagram.”

“We track performance using Google Analytics.”

AI Agent

“AI automates customer interaction, lead qualification, and repetitive tasks.”

“It integrates with your website or CRM and is easy to manage.”

Backend / General

“We use Node.js for secure and scalable backend systems.”

“We implement security measures like authentication, HTTPS, and backups.”

Our Agentic AI – Clear Positioning

Simple Explanation:

“Our Agentic AI works like a smart calling assistant—it automatically calls your leads, interacts with them in real-time, answers basic questions, and if the person is genuinely interested, it instantly connects them to your sales team or schedules a meeting.”

What It Actually Does (Breakdown)

- **Calls your provided lead data automatically**
- **Talks to clients in real-time**
- **Handles basic queries (services, pricing range, etc.)**
- **Identifies interested vs non-interested leads**
- **If interested → transfers call to sales person instantly**
- **If not available → schedules meeting with a link**
- **Syncs with your calendar / CRM**

👉 In short:

Lead qualification + call automation + meeting booking

Business Value (THIS CLOSES DEALS)

Instead of explaining features, say:

- **“You don’t have to manually call every lead”**
- **“No lead gets missed”**
- **“Your team only talks to serious prospects”**

- **“Faster response = higher conversion”**
- **“Works even outside business hours”**

1.What does this AI Calling Agent do?

Our AI Calling Agent automates inbound and outbound calling processes such as lead qualification, appointment booking, customer support, follow-ups, and basic query handling using human-like conversations.

2. Can the AI talk naturally like a real person?

Yes, the agent is designed with natural conversational flow, smart response handling, and contextual understanding to make interactions feel human-like and professional.

3. Can it handle incoming and outgoing calls?

Yes, it can manage both inbound customer calls and outbound sales or follow-up calls based on your business requirements.

4.Can the AI book appointments automatically?

Absolutely. The AI can check availability, schedule appointments, send confirmations, and even handle rescheduling.

5.Is it customizable for different businesses?

Yes, the AI can be trained and customized according to your industry, scripts, workflows, FAQs, and customer interaction style.

6.Can it integrate with CRM or other software?

Yes, we can integrate it with CRM systems, calendars, databases, WhatsApp, email systems, and other business tools.

7.What happens if the AI cannot answer a question?

In such cases, the call can be transferred to a human agent or a callback request can be created automatically.

8.Can we monitor conversations and reports?

Yes, the dashboard provides call logs, recordings, analytics, lead status, and performance reports for monitoring and optimization.

9.Is the system available 24/7?

Yes, the AI agent works round the clock without breaks, helping businesses capture leads and support customers anytime.

10.How secure is the system?

We implement secure APIs, encrypted communication, and controlled access to ensure customer and business data remain protected.

11. How long does setup take?

Depending on customization and integrations, setup can usually be completed within a few days to a couple of weeks.

12. What industries can use this AI Calling Agent?

It can be used in real estate, healthcare, education, eCommerce, customer support, recruitment, finance, service businesses, and many other industries.
